

Back-end Developer - Hack your future (en anglais)

RÉF | 9505

OBJECTIF ET CONTENU

Objectif

Bruxelles Formation and Hack Your Future Belgium offer a 2-month training in web development (Back-end) with the support of Agoria, the federation of Belgian companies in the Tech sector. The training is conducted in English to facilitate the professional integration of individuals who do not yet master French or Dutch.

This training aims to

- Acquire additional skills to perform the role of a Back-end Developer or Full Stack Developer in a company
- Create dynamic web pages from external databases
- Continue learning new digital professions in other complementary areas of expertise such as Development Engineer, cybersecurity, or artificial intelligence (AI).

Programme

This training is only given in English

The program is structured as follows:

- Learning back-end skills and technologies (the parts of the code of an application or software that enable its operation and are inaccessible to the user): NodeJS, Express, Authorization/Authentication, JWT Tokens, SQL Queries, and CORS.
- Learning agile methodology, project management
- Exploration of other domains: security, environment, artificial intelligence, communication, entrepreneurship, social media, and others based on demand.
- Active job search: as the goal of the training is to enable participants to find employment, emphasis will be placed on job and internship search throughout the training. This includes technical and soft-skills workshops, personalized coaching, and numerous networking events in partnership with companies.
